

Job Description

Role: AI & Embedded Systems Engineer – Autonomous and Smart Mobility Solutions

Employment Type: Full-Time

Experience: 0 – 2 Years

Location: Chennai / Hybrid

About the Role

We are looking for a passionate and innovative AI & Embedded Systems Engineer to design, develop, and deploy intelligent mobility and assistive technology solutions. The ideal candidate should have hands-on experience in computer vision, IoT integration, autonomous navigation systems, and real-time data processing.

Key Responsibilities

- Design and develop autonomous navigation solutions using ROS, SLAM, and LiDAR-based perception systems.
- Build ADAS-based intelligent obstacle detection and avoidance systems.
- Develop IoT-enabled communication modules for real-time monitoring and decision-making.
- Implement computer vision algorithms such as YOLO-based object detection and OCR.
- Develop real-time audio or speech feedback systems.
- Work with embedded platforms like Raspberry Pi and microcontrollers.
- Perform system integration, testing, and optimization.
- Collaborate with cross-functional teams for accessibility and usability improvements.

Required Skills & Technical Expertise

- Programming: Python, MATLAB
- Embedded Systems & Hardware: Raspberry Pi, IoT Architecture
- Computer Vision & AI: YOLO, OCR, Image Processing
- Autonomous Systems: ROS, SLAM, LiDAR-based perception
- Tools & Platforms: Xilinx Vivado, Power BI, Microsoft Office
- Understanding of signal processing and intelligent system design

Preferred Qualifications

- Bachelor's degree in Electronics and Communication Engineering or related field.
- Hands-on experience in assistive technologies, smart mobility, or autonomous systems.
- Strong problem-solving skills and real-world AI deployment experience.
- Experience integrating speech processing or accessibility-focused AI systems.

Soft Skills

- Leadership and teamwork abilities
- Strong communication and collaboration skills
- Ability to manage multiple projects and deliver scalable solutions
